

WHAT IS ERADI-FLY®?

ERADI-FLY® is a top-dress feed supplement that prevents the emergence of house flies, stable flies, face flies, and horn flies from manure of treated cattle and house flies and stable flies from manure of treated swine, equine, sheep and goats. Unlike conventional insecticides that attack the nervous system of insects, ERADI-FLY® works by interrupting the fly's life cycle, rather than through direct toxicity. When top-dressed, ERADI-FLY® passes through the digestive system and into the manure. With only very small concentrations, it is able to disrupt the normal molting process of the fly larvae. The mode of action is specific to insects. It disrupts the production of a substance called chitin, which is a key component of an insect's exoskeleton that is NOT found in mammals. Without a properly formed exoskeleton, the immature fly cannot survive to adulthood.

WHY "PRO+"?

PRO+ contains Chr. Hansen Multi Species Probiotic, which is a science-based research-proven product that is ideal for use in a variety of species. It improves digestive functions and stability, increases availability of nutrients from feed and improves rate and efficiency of gain.

NOT A CONVENTIONAL PESTICIDE

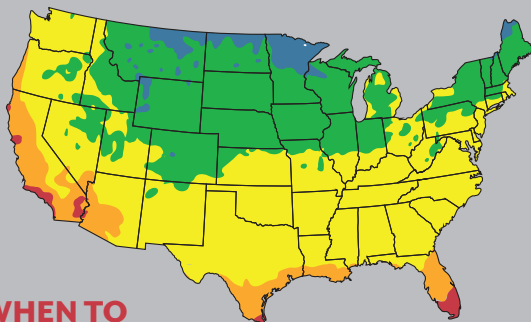

The active ingredient in BELSTRA ERADI-FLY® PRO+ w/ClariFly®, diflubenzuron, is considered by the Environmental Protection Agency (EPA) to pose a low risk to human health and the environment. Diflubenzuron has the following advantages over existing conventional pesticides.

- Lower toxicity to non-target organisms (birds, fish and plants)
- Lower potential for groundwater contamination
- Compatibility with Integrated Pest Management (IPM) practices
- Low use rates

- ZONE 2: JULY 1-JULY 30
- ZONE 3: AUG 1-AUG 31
- ZONES 4-5: SEPT 1-SEPT 30
- ZONES 6-8: SEPT 30-OCT 30
- ZONE 9: OCT 30-NOV 30
- ZONE 10: NOV 30-DEC 30

HOW DOES IT WORK?

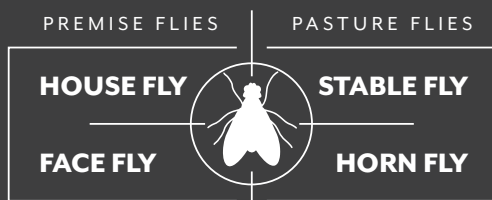

- 1** BELSTRA ERADI-FLY® PRO+ w/ClariFly® is ingested with the cattle's, swine's, equine's, sheep's or goat's feed. The animal disperses BELSTRA ERADI-FLY® PRO+ w/ClariFly® in their manure.
- 2** Female flies leave the animal for a few seconds to lay eggs in fresh manure or other organic waste.
- 3** BELSTRA ERADI-FLY® PRO+ w/ClariFly® breaks the life cycle here, preventing pupae from molting into adults.
- 4** Eggs will hatch into larvae that will feed and attempt to undergo 3 larval instars. BELSTRA ERADI-FLY® PRO+ w/ClariFly® breaks the life cycle by not allowing the larvae to successfully molt from one instar to the next.
